AND VALUE
STORAGE SYSTEM

ProxerSafe® Box

Where should my employees keep their phones and purses during their shift?

Where should my guests keep their phones and purses during their visit?

How to transfer the company's assets between shifts in a traceable way?

How can we reduce paperwork when handing over devices?

May we charge the phones, radios, tablets or laptops and keep them locked and safe at the same time?

The ProxerSafe® system is to manage and store keys, devices, instruments, tools and documents in a **supervised, authorized and online traceable** way.

If the task is to keep keys safely, the **KeySafe® Lock cabinets with RFID key plugs** are the right solution.

If you need to store not only keys but also mobile devices, documents, valuables, tools, parts, then the **cabinets with boxes** are the best choice. The **electronic devices can be charged** while being kept in the boxes.

The cabinets can be ordered with a **variety of box sizes and numbers,** adjusted to the dimensions of the stored objects and the Client's needs. For user identification RFID cards or tags, PIN code and/or biometric identification can be used as well.

To protect the valuables from violent attacks, the cabinets can be built into certified safes (ProxerSafe® Security system).

The ProxerSafe® cabinet does not allow opening any boxes only by those who have the rights to the given box. Logs show who opened which box and when.

The cabinets can be queried and managed remotely, but they can also operate offline in stand-alone mode.

FEATURES

- **RFID, PIN or biometric** user authentication
- Authorization can be granted or revoked per box and per user, even remotely
- The cabinet can be programmed and queried via the touchscreen of the built-in computer and/or **remotely** via the ProxerSafe® Web Access interface.
- **Multi-cabinet** management, even **system-level management** of a cabinet network
- The built-in computer with touchscreen ensures offline, **stand-alone operation** in case of network failure
- **Logs** on box and cabinet events can be checked on the screen and remotely as well

OPTIONS

- Metal or safety glass box doors
- **Integrated chargers:** charging devices while keeping them safe with integrated USB charger or 230V socket
- Key holder plugs can be integrated into boxes
- At identification the user's a photo is also displayed on the screen alongside the name
- **Alarms and notifications** can be set, the cabinet can be connected to the fire alarm system
- **Scales** can be integrated into the boxes for drug cabinets or handgun cabinets
- Box modules and key modules can be integrated in one cabinet – ProxerSafe® Combo
